

RC-108

8-Button Presentation Controller

The RC-108 is a presentation controller for twisted pair transmitters. The unit can switch up to 8 sources that are interconnected in series through looping inputs to a single twisted pair receiver.

FEATURES

- System Interconnect Connects compatible twisted pair transmitters in series using looping inputs (and K-Net[™] control to the RC-108) to a single twisted pair receiver. Multiple transmitters to a single receiver can be connected to a single RC-108 as long as the total number of transmitters does not exceed 8.
- Compatible Models All transmitters must have a looping twisted pair input and K-Net control, for example, TP-107, TP-107AV and TP-107AVR.
- Flexible Control Front panel, K-Net & RS-232.
- K-Net Control Channel Power and control data provided over a single cable.
- K-Net Selectable Termination.
- Desktop Size.
