# RC-116
16-Button Presentation Controller

The RC-116 is a presentation controller for twisted pair transmitters. The unit can switch up to 16 sources that are interconnected in series through looping inputs to a single twisted pair receiver.

## FEATURES

- **System Interconnect** - Connects compatible twisted pair transmitters in series using looping inputs (and K-Net™ control to the RC-116) to a single twisted pair receiver. Multiple transmitters to a single receiver can be connected to a single RC-116 as long as the total number of transmitters does not exceed 16.
- **Compatible Models** - All transmitters must have a looping twisted pair input and K-Net control, for example, TP-107, TP-107AV and TP-107AVR.
- **Flexible Control** - Front panel, K-Net & RS-232.
- **K-Net Selectable Termination.**
- **Desktop Size.**
