

TP-126xl

Computer Graphics Video, Stereo Audio & Bidirectional RS-232 over Twisted Pair Receiver with EDID

The TP-126xl is an extended range twisted pair receiver for computer graphics video, unbalanced stereo audio and bidirectional RS-232 control command signals. The unit receives a twisted pair signal from the TP-125xl that it converts to computer graphics video, RS-232, unbalanced stereo and S/PDIF audio signals.

FEATURES

- **Max. Resolution** - WUXGA & 1080p.
- **HDTV Compatible.**
- **System Range** - More than 820ft (more than 250m).
- **Cable** - We recommend the use of Kramer's BC-XTP high quality skew-free, unshielded twisted pair (UTP) cable. When using UTP cable, it is advisable to ensure that the cable is installed far away from electric cables, motors and so on, which are prone to create electrical interference.
- **Bidirectional RS-232 Interface** - Commands and data can flow in both directions via the RS-232 interface, allowing status requests and control of the destination unit.
