

VP-411DS

4x1 Computer Graphics Video & Stereo Audio Standby Switcher

The VP-411DS is a high-performance switcher for computer graphics video signals, with resolutions up to and exceeding UXGA, and unbalanced stereo audio signals. When configured as a standby switcher, the switching priority can be set for each of the four inputs.

FEATURES

- High Bandwidth 300MHz (-3dB).
- Looping Input Input 1.
- Automatic Standby Switching Priority can be set for each of the 4 inputs via DIP-switches.
- Kr-isp® Advanced Sync Processing Ensures compatibility with a wide range of computers (even if the sync level is too low) by restoring the sync signal waveform. Kr-isp® advanced sync processing can be enabled or disabled.
- Primary Input Selectable.
- Flexible Control Options Front panel, RS-232 (K-Router™ Windows®-based Kramer software is included), contact closure, & IR remote (included).
- Output Disconnect.
- Front Panel Lockout.
- Desktop Size Compact size. 2 units can be rack mounted side-by-side in a 1U rack space with an optional RK-1 rack adapter.

VP-411DS
